

A COHERENT INTERFACE FOR UNCERTAINTY

Market Structure OS for legible market theses.

Market Structure OS is the company and software platform. The Strategy Lab is where users design, test and monitor thesis-driven strategies. PPE is the first tool inside the lab - a probability/thesis engine that compares what markets imply with what a human believes.

MSOS

Company and platform identity.

Strategy Lab

Workspace for designing thesis-driven
market strategies.

PPE

First tool: probability/thesis comparison
engine.

01 - READ

Read market surfaces

Options, event probabilities, positioning and contextual
data as modular lenses.

02 - STATE

State your thesis

Translate a human view into a structured thesis the system
can compare.

03 - FIT

Find fitting expression

Compare expression families without hiding assumptions
or risk constraints.

04 - LEARN

Build calibration memory

Track perception quality, expression fit and outcomes over
time.

Command Center

Read surfaces → state thesis → fit expression →

Monitoring

Review

Before MSOS can suggest expression fit

The system records exactly what claim is being tested.

- Market view, reference model and user belief are preserved as a snapshot.
- Reference model remains inspectable; it is not hidden authority.
- The thesis becomes reviewable later, whether or not you execute anything.

INVESTOR / CUSTOMER CLOSE

A company built around legible market disagreement.

MSOS sits between market data, thesis formation, expression planning, optional execution rails and learning. The wedge is narrow; the company vision is broad: make priced beliefs legible across market surfaces.

01

Read surfaces

02

State belief

03

Fit expression

04

Monitor

05

Learn

Initial customer

Thesis-driven crypto/options traders and advanced market researchers.

Initial product

Strategy Lab with PPE options-distribution tool; BTC options enabled first.

Revenue hypothesis

Subscription for thesis formation, monitoring and calibration memory.

Validation path

Friends preview → trader testers → paid beta.

MARKET CONTEXT

Large adjacent spend; clearer wedge.

Financial data platforms, derivatives venues and crypto-native trading rails already support large markets. MSOS does not need to replace them; it can become the thesis layer that explains what those markets imply and where a user disagrees.

1

Financial data spend

LSEG reported £8.49B 2024 total income; FactSet reaffirmed \$2.305B-\$2.325B FY2025 revenue guidance.

2

Derivatives activity

CME reported record Q1 2025 ADV of 29.8M contracts.

3

Crypto-native demand

Crypto perpetual futures reached ~\$61.7T volume in 2025, and regulated U.S. perp rails are emerging.

Indicative adjacent-market context, not a formal TAM/SAM/SOM. Sources: WSJ/LSEG reporting, Investopedia/FactSet reporting, Reuters/CME and Reuters/CryptoQuant reporting.
